---

I am feeling honoured to unveil before you the Volume 5, Issue 1 of “Brainwave: A Multidisciplinary Journal”, published by Brainware University, West Bengal, India. The present Issue comprises articles from various emerging areas related to different disciplines. I am quite confident that the articles in this Issue will not only add to the knowledge base of the readers but also motivate many of the potential researchers to make novel contributions to the literature.

As per our policy, the submitted manuscripts are double blind peer reviewed by at least two independent reviewers. Further, I take this opportunity to mention that our reviewers possess sound academic background and also have a number of publications in Journals of repute. It deserves mentioning in this context that finalization of the panel of eminent reviewers happens to be a difficult job but it helps us to ensure that only the novel articles are accepted for publication in our Journal.

Further, it is my pleasure to express my gratitude to the members of both editorial board and editorial advisory board. I am also indebted to our reviewers who have steered the manuscripts through multiple cycles of review in order to bring out the best from the contributed articles. I extend my heartfelt thanks to the contributing authors for considering our Journal as a platform to showcase their research work. I am also thankful to the authors whose articles have not been accepted for publication in this Issue owing to some relevant shortcomings. I do believe that they will overcome the shortcomings and submit articles worthy of publication in the next Issue. I will fail in my duty if I do not thank the stakeholders who worked hard for timely publication of this Issue of the Journal.

Finally, it is relevant to surface that we have tried our level best for maintaining the quality of the Journal. Still, there may remain scope for further improvement. Accordingly, I appeal to the contributors and readers to mail me their suggestions in the context of enhancing the quality of the forthcoming Issues.
